

# Twitter Bootstrap and BOINC

Carlos Val, Francisco Sanz

25 September 2013

# What is twitter bootstrap?

---

Sleek, intuitive, and powerful front-end framework for faster and easier web development, a free collection of tools for creating websites and web applications.

It contains HTML and CSS-based design templates for typography, forms, buttons, navigation and other interface components, as well as optional JavaScript extensions

# Bootstrap Features

---

- **Scaffolding** Global styles for the body to reset type and background, link styles, grid system, and two simple layouts
- **Base CSS** Styles for common HTML elements like typography, code, tables, forms, and buttons. Also includes Glyphicons, a great little icon set
- **Components** Basic styles for common interface components like tabs and pills, navbar, alerts, page headers, and more
- **JavaScript plugins** Similar to Components, these JavaScript plugins are interactive components for things like tooltips, popovers, modals, and more

# BOINC php pages with bootstrap

---

## Minimal changes

- Include bootstrap and jquery
- page\_head() inside project.inc
- page\_tail() inside project.inc
- changed some classes of some elements
- /user/style.css to override the bootstrap styles

## Useful links
